**Subject:** Notes from meeting between NC and Chemours

FYI- below is a link to notes from the closed meeting in NC last week between the local government and Chemours.

In his summary of the closed Chemours meeting on 6/14, the Chair of the Brunswick County Board of Commissioners notes that, according to the company, "they re-capture 100% of the GenX produced at this operation" and there "is a separate and apparently unrelated process, in a different part of its facility, where GenX is an 'unregulated by-product' of that process. This is apparently the source of the GenX that has been found in our river. This has apparently been taking place since 1980." I believe this is the subject of the press inquiry Enesta forwarded to Linda earlier today.
